"RED SATIN"
F₁ Hybrid Multiflora Petunia
1957 All-America Selections

"Red Satin" displays incredibly vivid and shining scarlet-red flowers. This marvelous red which so captivated the judges in the trials is strong and enduring everywhere. Heat and sunshine fail to fade the color. Plants attain a 10 to 12 inch globe-shaped form and then maintain that size and character right through the season. The persistent neatness of the plants makes a perfect vehicle for the 2½ to 3 inch blooms.

Very free flowering, and a must for bedding plant growers everywhere.

Of the most important items listed we have indicated the number of seeds per ounce to better enable you to figure the amount of seed you'll need for your planting requirements. Keep in mind that you cannot expect every seed to germinate f.i. most large seeds germinate from 60 to 80 percent under normal germinating conditions, sometimes a higher percentage is obtained, which means that a little more seed is required to obtain the number of plants desired.

STOCKS—(Continued)

TRYSONIC. 42,000 S. Seed of Trysonic Stock will produce in excess of 86% doubles if properly handled, according to the following instructions:

Trysonic Stock singles are smaller and weaker than the doubles in the seedling stage. Therefore, the practice of sorting or segregating Trysonic Stock seedlings by size results in a division of plants into doubles and singles with but few borderline exceptions.

Through such sorting 86% of a grower's flats will be of a slightly higher double count than the normal 86% from Trysonic Stock seed. Sorting of Trysonic seedlings into flats is not recommended, take all plants as they come, they will produce about 86% doubles.

Trysonic 7 Weeks Mixed. For growing in warmer climates. Plant first throws a central spike of bloom some 6 inches or more in height, then goes to produce numerous side branches throughout its growing period, eventually forming an attractive branching plant from 12 to 15 inches in height. ½ Tr. Zinnia "Giant Dahlia Flowered"

ZINNIAS

One of the most popular and easily grown annuals, Zinnias grow in most any soil, but do best in a sunny location and thrive on heat.

Most of our seed is grown by "Bodger's in California" introducers of the Dahlia Flowered and California Giant or Mammoth types, therefore, insuring you of the best in Zinnias your money can buy.

From "Burpee's" another pioneer in the Zinnia field come the newer varieties - Burpee Hybrids - Super Giants - Floradale Beauty - etc.

Zinnias require a warm temperature, 65° minimum-better, 70° — to germinate satisfactorily.
